

## Introduction to Artificial Intelligence

Artificial intelligence (AI) is intelligence demonstrated by machines, as opposed to the natural intelligence displayed by animals including humans.

AI research has been defined as the field of study of intelligent agents, which refers to any system that perceives its environment and takes actions that maximize its chance of achieving its goals.

The term artificial intelligence had previously been used to describe machines that mimic and display human cognitive skills associated with the human mind.

Machine learning is a subset of AI that enables systems to learn and improve from experience without being explicitly programmed to do so.
